Pyridinium Periodate, Crystal Structure

The crystal structure of the room-temperature ferroelectric phase of pyridinium periodate $\text{[C}_6\text{H}_5\text{NH}]^+\text{[IO}_4^-]$ has been determined by X-ray diffraction as orthorhombic, space group Cmc\textsubscript{2}1 with $a = 8.347(2)$, $b = 7.270(2)$, $c = 12.732(3)$ Å and $Z = 4$. It was refined to $R_1 = 0.0281$ $wR_2 = 0.0762$ for 389 absorption-corrected reflections. The structure comprises isolated IO\textsubscript{4} tetrahedra linked together by disordered pyridinium cations involved in a network of bifurcated hydrogen bonds. The average I-O distance is found to be 1.75(1) Å.
