*Ajuga parviflora*, Labiatae, Dihydroquinol and Quinol Derivatives

Dihydroquinol derivative 1, quinol glucopyranoside 2 and quinol derivative 3 have been isolated from the ethyl acetate soluble fraction of *Ajuga parviflora* and their structures have been elucidated through spectroscopic studies as methyl 2-[2,2-dimethyl-6-oxo-7-dihydro-1,3-benzodioxol-3(6*H*)-yl]acetate (1), 2-hydroxy-4β-methyl-4α-(β-D-glucopyranoside)-2,5-cyclohexadien-1-one (2) and (4-oxo-2,5-cyclohexadien-1-yl)acetic acid (3). The known quinol 4 has also been isolated for the first time from this species.
