*Ajuga relicta* P. H. Davis, Steroids, Terpenoids

From the acetone extract of *Ajuga relicta* P. H. Davis, four steroids, two being new ones, (24S)-24-ethylcholesta-5,25-diene-11\(\alpha\)-hydroxy-1-one (1) and (24S)-24-ethylcholesta-5,25-diene-7\(\alpha\)-hydroxy-3-one (2), two known triterpenoids and two known diterpenoids were isolated in addition to a monoterpene and an iridoid. The structures were characterized by spectral methods including UV, IR, \(^1\)H, \(^13\)C NMR spectroscopy and mass spectrometry.
