Z. Naturforsch. **59b**, 817 – 820 (2004); received January 10, 2004

A new biologically active cyclic peptide, Pseudostellarin G was synthesized and the structure was established on the basis of analytical, IR, NMR and mass spectral data. The newly synthesized compound was screened for its antimicrobial and pharmacological activities.

*Key words:* Cyclic Peptides, Pseudostellarin G, Antimicrobial Activity, Pharmacological Activity
