Z. Naturforsch. 60\(^b\), 347 – 350 (2005); received September 9, 2004

A new triterpenoid, glaucinoic acid (2\(\alpha\), 3\(\beta\), 19\(\alpha\), 24-tetrahydroxyolean-12-en-30-oic acid) (1) along with several known compounds, arjunic acid (2), arjungenin (3), sericoside (4), and friedelin (5) were isolated from the stem barks of *Terminalia glaucescens*. These compounds showed \(\beta\)-glucuronidase inhibitory activity. The structures were identified on the basis of spectroscopic techniques.

*Key words: Terminalia glaucescens*, Combretaceae, Glaucinoic Acid, \(\beta\)-Glucuronidase Inhibition
