The fruits of *Cipadessa fruticosa* Bl. afforded two new limonoids: methyl 8 $\alpha$ ,30 $\alpha$ -epoxide-3 $\beta$ -(2'-methylbutyryloxy)-1-oxomeliacate (cipadesin A) and methyl 21,23-dihydro-23-hydroxy-21-oxo-3 $\beta$ -tigloyloxy-1-oxomeliac-8(30)-enate (febrifugin A), along with the known limonoids cipadesin, khayasin T, febrifugin, ruageanin A and mexicanolide. Their structures were elucidated on the basis of spectroscopic methods.

*Key words:* *Cipadessa fruticosa*, Meliaceae, Limonoid, Cipadesin A, Febrifugin A
