Z. Naturforsch. 60b, 805 – 810 (2005); received February 14, 2005

The new ent-kaurane diterpenoid weisiensin C (1) (1\(\alpha\),7\(\alpha\),14\(\beta\),18,20-pentahydroxy-ent-kaur-16-en-15-one), together with four known ent-kaurene diterpenoids, glaucocalyxin A (2), kamebanin (3), macrocalyxin D (4), and excisanin K (5), was isolated from the leaves of *Isodon weisiensis* C. Y. Wu. The structure of the new constituent (1) was elucidated by spectroscopic methods and confirmed by single-crystal X-ray diffraction.
