N,N'-Disubstituted (2-phenylamino)-, (2-methylamino)- and (2-benzylamino)benzohydrazides (**1**) are cyclized by *in situ* prepared 1,1'-oxalyldiimidazole to give 3-amino-2,3,4,5-tetrahydro-1*H*-1,4-benzodiazepine-2,3,5-triones **2** as the major product. Depending on the substituents of **1** competitive formation of quinazoline-2,4-diones **3** and 1,3,4-oxadiazoline-2-one **4** is observed. The formation of heterocycles **2**, **3**, **4** is rationalized *via* a common primary intermediate **1A**.

Key words: *N,N'*-Disubstituted Anthranilic Hydrazides, 1,1'-Oxalyldiimidazole, 1,4-Benzodiaz-epine-2,3,5-triones, 4-Aminoquinazoline-2,4-diones, 1,3,4-Oxadiazoline-2-ones
