Paullinoside A (**1a**), a new cerebroside, and a new ceramide named paullinomide A (**2a**), have been isolated from *Paullinia pinnata*. Their structures were determined by comprehensive analyses of their 1D and 2D NMR, HREIMS spectral data, and chemical evidence. The remaining four known compounds were identified as  $\beta$ -amyrin,  $13\beta,17\beta$ -dihydroxy-28-norolean-12-ene,  $\beta$ -sitosterol, and  $\beta$ -sitosterol glucopyranoside.

*Key words:* Cerebroside, Ceramide, *Paullinia pinnata*
