A one-pot synthesis of sterically congested *N*-vinyl imides in fairly high yields by the reaction of ethyl 3-phenyl-2-propynoate, imides and triphenylphosphine is reported. The structures of these compounds were confirmed by IR, <sup>1</sup>H, and <sup>13</sup>C NMR spectroscopy, and by a single crystal X-ray structure determination. The structural analysis of the products indicated that the reaction is regioand stereoselective.

Key words: Phosphorus Ylide, Ethyl 3-Phenyl-2-propynoate, Vinyltriphenylphosphonium Salts, Crystal Structure, N-Vinyl Imide
