Corydalis taliensis Franch is a perennial herb used for treatment of rheumatic arthritis, toothache, and hepatitis. The chemical investigation of this plant resulted in the isolation of a new compound, named taliensineside (**1**). Its structure was identified on the basis of spectral evidence. In addition, thirteen known isoquinoline alkaloids (**2** – **14**) were isolated and identified by spectroscopic analysis and comparison of their spectral data with those reported previously.

Key words: *Corydalis taliensis* Franch, Isoquinoline Alkaloid, Taliensineside
