*Corydalis taliensis* Franch is a perennial herb used for treatment of rheumatic arthritis, toothache, and hepatitis. The chemical investigation of this plant resulted in the isolation of a new compound, named taliensineside (1). Its structure was identified on the basis of spectral evidence. In addition, thirteen known isoquinoline alkaloids (2 – 14) were isolated and identified by spectroscopic analysis and comparison of their spectral data with those reported previously.

**Key words:** *Corydalis taliensis* Franch, Isoquinoline Alkaloid, Talensineside
