A novel sesquiterpene named cyclopinol (**1**) together with two related known compounds, cyclocalopin A (**2**) and *O*-acetylcyclocalopin A (**3**), has been isolated from the basidiomycete *Boletus calopus*. The structure of compound **1** was established on the basis of spectral methods (MS, IR, 1D, and 2D NMR experiments).

Key words: *Boletus calopus*, Basidiomycete,
Sesquiterpene
