Two new flavanes, (2S)-4′,7-dihydroxy-6,8-dimethylflavane (1), and (2S)-5,7-dihydroxy-4′-methoxy-8-methylflavane (2), together with five known flavanes, (2S)-3′,7-dihydroxy-4′-methoxy-8-methylflavane (3), (2R)-4′,7-dihydroxy-8-methylflavane (4), (±)-3′,7-dihydroxy-4′-methoxyflavane (5), (±)-4′,7-dihydroxy-3′-methoxyflavane (6), and (2S)-4′,7-dihydroxyflavane (7), were isolated from the stem of *Dracaena cambodiana*. Their structures were determined by spectroscopic techniques (UV, IR, 1D and 2D NMR). Their antimicrobial activities were preliminarily examined by the filter paper disc agar diffusion method.

*Key words:* *Dracaena cambodiana*, Flavane, (2S)-4′,7-Dihydroxy-6,8-dimethylflavane, (2S)-5,7-Dihydroxy-4′-methoxy-8-methylflavane, Antimicrobial Activity
