Ziziphorins A (**1**) and B (**2**), new flavonoids, have been isolated from the chloroform-soluble fraction of *Ziziphora tenuior* along with 1-hentetracontanol, β-sitosterol-3-O-β-D-glucoside, ursolic acid, oleanolic acid, and apigenin. Their structures were assigned from spectral studies including 1D and 2D NMR spectroscopic data.

Key words: Ziziphora tenuior, Labiatae, Falvonoids, Ziziphorin A, Zizphorin B
