Z. Naturforsch. 58c, 820–825 (2003); received March 27/May 21, 2003

Two new phenylethanoid glycosides integrifoliosides A (2) and B (3), along with a known phenylethanoid glycoside alyssonoside (1) and a flavone glucoside chrysoeriol-7-O-\textbeta-d-glucopyranoside (4) were isolated from the aerial parts of *Phlomis integrifolia*. The structures of the new compounds were identified as 3,4-dihydroxy-\textbeta-phenylethoxy-O-\textbeta-d-apiofuranosyl-(1→4)-\textalpha-l-rhamnopyranosyl-(1→3)-4-O-feruloyl-\textbeta-d-glucopyranoside (2) and 3-hydroxy-4-methoxy-\textbeta-phenylethoxy-O-\textbeta-d-apiofuranosyl-(1→4)-\textalpha-l-rhamnopyranosyl-(1→3)-4-O-feru-

Key words: *Phlomis integrifolia* Hub.-Mor., Phenylethanoid Glycosides, Integrifoliosides A and B
