A new prenylated depsidone, atrovirisidone B (2), together with naringenin (3) and 3,8"-binaringenin (4) were isolated from the roots of *Garcinia atroviridis*. Their structures were determined on the basis of spectral data interpretation. Compound 2 showed cytotoxic activity against human breast (MCF-7), human prostate (DU-145) and human lung (H-460) cancer cells.

\textbf{Key words:} *Garcinia atroviridis*, Cytotoxic Activity, Atrovirisidone B
