A new tetranortriterpene \(3\alpha\)-acetoxy-24,25,26,27-tetranortirucalla-7-ene-23(21)-lactone (3), and eleven other compounds were isolated from the twigs of *Amoora dasyclada*. The structure of compound 3 was identified on the basis of spectroscopic data, and the bioactive experiments of 1 and 3–5 against AGZY 83-a (human lung cancer cells) and SMMC-7721 (human liver cancer cells) are documented. Among them, compound 5 exhibited a strong activity against SMMC-7721.

**Key words:** *Amoora dasyclada*, Tirucallane Triterpenoid, Anticancer Activity
