A new *ent*-halimane-type diterpene, named 5(10),14-*ent*-halimadien-3\(\beta\),13\(S\)-diol (1), was isolated from the bark of *Amoora ouangliensis* and its chemical structure determined on the basis of spectroscopic analysis. Additionally, ten other diterpenoids were obtained from *A. ouangliensis* and *A. stellato-squamosa*. The bioactive experiments of all compounds against AGZY 83-a (human lung cancer cells) and SMMC-7721 (human liver cancer cells) cells were documented.

**Key words:** 5(10),14-*ent*-Halimadien-3\(\beta\),13\(S\)-diol, *Amoora ouangliensis, Amoora stellato-squamosa*
